TOP 10

Highlights of OTD Programs, Products, and Tools

The Office of Transportation Data (OTD) provides information that may help governments and the public make data-driven decisions that maximize funding, optimize operations, prepare for emergencies and better serve citizens.

10 State & Federal Reports

OTD submits a variety of state and federal reports covering topics, such as motor-fuel consumption, vehicle registration, physical features, highway funding, and more.

9 Data Analysis

OTD offers a variety of spatial and statistical analyses of data.

8 Honorarium App*

Look-up a roadway or road feature named after notable constituents. Honorariums are designated by the Georgia General Assembly and the Georgia Transportation Board.

7 Local Government Programs

Coordinates the most accurate road network information for the Local Maintenance and Improvement Grant, the Transportation Investment Act, and the Moving Ahead in the 21st Century Act (MAP-21), a data collection effort for federal reporting.

1 Traffic Counts App*

Navigate to a specific counter location to view traffic data, including hourly counts, yearly statistics, vehicle classification breakdowns, and more. Data availability may vary by location.

6 Functional Class App*

The functional class app showcases the network of arterials, collectors, and local roads that define the state's roadway network.

2 Maps*

The Official Highway and Transportation Map, county maps and city map books showcase the network of Interstates, state routes, county roads, city streets and popular destinations.

3 Geospatial Data & Road Characteristics

Features and locations are depicted on maps via geospatial data. Users can access road centerlines and data such as ownership, operations, medians, surface type, and more.
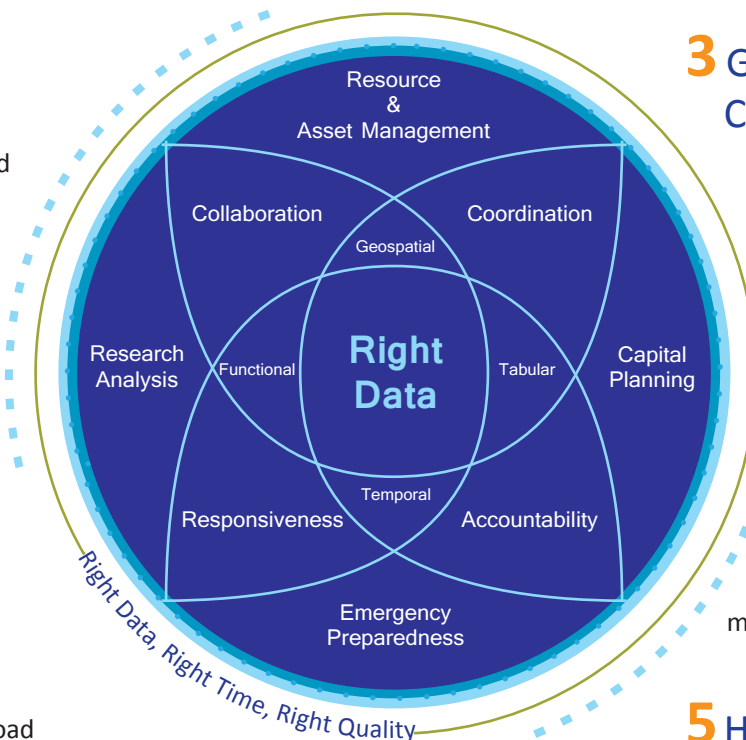

4 Road Mileage*

Centerline, lane, and vehicle mileage data are available via the 400 Series Roadway Mileage Reports. View the certified public mileage.

5 Highway System Management Program

Local governments can request a change to the State Highway System. When a request/project is initiated, a study is conducted, a recommendation is made, and a formal authorization is issued.

Right Data, Right Time, Right Quality
